High Speed Single Filer - very cool!

One of our smallest footprint transfer systems.

Multi-Conveyor has developed one of our smallest footprint, single-filing systems for low profile parts. This system will actually "de-stack or knock-down" the products as they move aggressively forward in a continuously and unstoppable motion to meet production demands.

We have incorporated a logic sensor system that is actually counting each individual product piece before it is conveyed into a shipping case. The system was synchronized specifically to not only meet but exceed the customer's demands.

The synchronized system is a testimony to Multi-Conveyor's ingenuity and attention to detail, which are complimented by our advanced, in-house product testing facility.

Products this low in height and small in diameter are typically seen in the food, pharmaceutical, industrial and household goods markets.
